

2nd Annual Eleanor M. Saffran Cognitive Neuroscience Conference

**“Dynamic Interactions of Language with Other Cognitive Processes:
Implications for Treatment of Language Disorders”**

Monday, September 24, 2007

Morning Session

The disordered attention hypothesis in aphasia: Theoretical accounts and recent evidence
Malcolm McNeil, Ph.D., and Will Hula, Ph.D., University of Pittsburgh

An intention manipulation for treatment of naming in aphasia
Bruce Crosson, Ph.D., Department of Clinical and Healthy Psychology, University of Florida

Disorders of executive function and their role in language processing
Randi Martin, Ph.D., Department of Psychology, Rice University

Afternoon Session

***Three questions regarding phonological short-term memory: What is it? Does it causally affect
vocabulary growth? Does it matter for specific language impairment (SLI)?***
Prahlaad Gupta, Ph.D., Department of Psychology, University of Iowa

Space and language
Anjan Chatterjee, M.D., Department of Neurology, University of Pennsylvania

Speech perceived through a damaged temporal window: Lessons from aphasia and word deafness
Gerry Stefanatos, Ph.D., Moss Rehabilitation Research Institute and Temple University
